

Custom Manufactured Driller's Controls

Gen II system outside on drill floor

HMI touch screen

Ensign ADR rig with Gen II system

Mustang Controls designed and built the first diesel electric over pneumatic/hydraulic driller's controls and the first electric triple ever done.

- Our PLC controls eliminates all air and hydraulic lines being run to the control panel greatly reducing rig-up time and maximizes efficiency.
- The touch screen panel with onboard diagnostics helps reduce down time due to electrical issues
- Our systems have the option of wireless mud pump controls
- Eliminates the need to convert engine throttle from pneumatic controls back to electrical
- Instant and positive throttle response from the mud pump engines eliminating air "hunting".
- Build customized pneumatic panels.

Conventional air controls

Generation I rig controls

Servicing your controls on-site 24/7

Our technicians are available any time, any day to service your driller's control systems
